

## Comfort

The Ruby Tuesday Restaurant of Branson Missouri designed five feet by five feet glass windows to bring light, views and an outdoor ambiance to the restaurant. However, intense glare, heat and reflections off parked automobiles made dining uncomfortable and at times next to impossible.

Fabric shades were installed but darkened the dining area and were a constant source of problems to the staff, who had to raise and lower them according to the position of the sun and the requests of the customers.

After considerable research, manager, Kevin O'Connell consulted with a Vista dealer who recommended the installation of CPFilms' new line of hi-tech solar control window films — VISTA®.

VISTA Window Film is a laminate of polyester and metallized coatings. The film is constructed with an exclusive, clear, distortion free adhesive system and a special scratch-free face coating that allows for easy maintenance. The specific film selected was VISTA "Dayview", a neutral film that when installed is virtually

invisible from both sides of the window. The film carries a ten year warranty for materials and labor.

VISTA cut the glare and heat to the point that dining was truly in a comfortable and trouble-free environment without shades. Furthermore, the VISTA film eliminated 99% of harmful ultraviolet radiation thereby helping to protect the restaurant interior from fading.

When the filming was completed, Mr. O'Connell said, "Our customers, who could not detect the VISTA Window Film, asked what we had done to create such a light and cheery interior. I explained that we just entered the twenty-first century and added hi-tech solar control window film throughout!"

The window filming of the Ruby Tuesday Restaurant in Branson has been such a success the company has installed solar protection film at all of its eight locations in Missouri, and there are over 400 Ruby Tuesday Restaurants throughout the United States.
